                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fragments A-C of HSA are expressed as fusion proteins with the signal peptide of E coll salvaline prosphatase. The fragments are selected for their specific properties. The Creeninal francaed fragment. B. does not bind long-chain fatry acids but does not bind long-chain fatry acids but does not bind long-chain fatry acids but forebut to various redicines at the central legion. The N-terminal truncated fragment. C. has good stability in protein folding. The central segment. A. has characteristics of both B and C. See also AACC596-096-098.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The method relates to a method of recombinantly producing human serum albumin (HGM) in year by altering the coding sequence of 18.4 to comperted as these codon has the compete HSA gene (NAA1003); was generated as three synthesis in tagments (AAA1003-A1004); was generated as three synthesis of HSA fargetts (AAA1003-A1004); coned by recombinant that rechology, Each HSA fargetts was synthesised from overleption to the representation of the HSA encoded by the human gene with a yeast codon bias. The invention also covers a recombinant generated from the process for producing carrying the recombinant expression which is process for producing the recombinant expression where the process for producing human serum albumin in the yeast hose codes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Process for preparing recombined human serum albunin - which comprises yeast biased sex codons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 10.0%; Score 303; DB 21; Length 545; Pred How 9-5e-255; Indels 0; Gaps Macches 545; Conservative 0; Manacches 0; Indels 0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present dequence represents human aibinin protein. The specification describes a method for the continuous detection of ischemic states. The method comprises of an aiteration of the serum protein aibinin. The method comprises contexting a solid object a state of a state of a bid object a state of a metal of a metal icos and in a state of a metal icos and in a state the rest and abid and a state of a metal icos and in a sale, where the rest ico hast a mixture containing bound near its and unbound metal icos and their determine the amount of bound metal icos and unbound metal icos and their determine the amount of bound metal icos and unbound and abid in the rest of a metal of a bound on the aibinin Niterriuus. The amount of bound metal icos and incheric event. The methods are useful for description perioperitors to the methods are also useful for distinguishing perioperitors and progressive contain an anised by anongst other things.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12. ```
The present invention describes an albumin fusion protein (1) comprising a time protein. Yau'd (a fragement extrained (3) albumin (2) comprising a time (2) protein. Yau'd (a fragement extrained (3) albumin (2) comprising a time (2) y defined sequence in ABS70006 of 685 amno actions. Where the fragment or variant has albumin or therepetic protein X activities. Albumin (1910) proteins are stablished in muncosuppressive.

Antidadelic. International constitution and poortalic activities. Albumin (1910) proteins are stablished therefore in C3. C34 and C36 useful for treating various diseases antidadelic C3. C34 and C36 useful for treating various diseases. C3 antidadelic C3 and C30 useful for treating various diseases antidadelic C3. C34 and C36 useful for treating various diseases antidadelic proteins. Fining albumin to therapeutic proteins stablishes the citerature protein activity it also reduces the need to formulate the protein solutions with large excesses of carrier proteins astallishes the constant solutions with large excesses of carrier proteins and expense of carrier proteins and equipment of the finite of the fi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New alburin fusion proteins, useful for treating diseases and disorders such as cancer, comprise therapeutic protein fused to albumin

unin fusion proteins computating a therapeutic protein and albunin, in a file treating lumine system disorders (e.g., transplant coins), blood related disorders (e.g., myocardial infarction) and arpoliterative disorders.

Claim 1, Fig 9; 380pp; English.

The invention relates to albumin fusion proteins contrising therapeutic protein fused to a hour, have an extended shelf-like. The albumin tusion proteins are useful in the treatment, prevention, dispanses and/or detection of diseases, disorders such as intuine system disorders le.g. transplant refection? Disod respections of disorders con a intuine system disorders le.g. transplant refection; bytemptodiscipling disorders le.g. controllers in the section; controllers in the disorders le.g. stringthings;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The presunt invention whites to a new standard and accuracy control substance for determination of glycopylated protein. The invention is marked for determination of glycopylated protein in the diagnosis of machine of Dyncopylated protein in the diagnosis of machine of Dyncopylated protein and fortecommune provide favourable fulfilled linearity. The present animo diagnosis the special extension of the determination associated protein and described in the invention in the described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A standard substance for determination of plycosylated protein colliding glycosylated albumin and fruntosamine, used in diagnosis of diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     C.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8 8 8
                                                                                                                                                                                                                                                                                                                              The invention related to a rethod for insting cancer cells. The nethod is described to reasoning them cancer cell problemation between the results problematic or abbunity the potential for inhititing cancer cells problematic using abbunin derived peptides. The invention is also useful for days survening assays, as a set, as for evaluating capside function the present degrees of survening is busen securial bound (RRA) intaced to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12: DVCTARHUNESTELKKYLVEIARRHEYEVAPELLFAARYYAATTECCAARAACU,P 180

A set himse nerun to the about to grow as three forms. A shown in the about to the about as three nerun discase or discase or discase or discase or the about and three about to grow as three about to a stender that may be modificated by the about protein. The about protein is useful for treating and in tropin vivo activity. The protein is useful for treating and in tripoint vivo activity. The protein is useful for treating and discretes such as cancer, reproductive discretes, digestical disprised infundactionary syndrome, Alls, endorring disorders to discrete adjaction infundactionary syndrome, Alls, endorring disorders or engagements. The protein and connective disorders or engagements. The present sequence represents his Alls protein.
New fusion protein for treating disease e.g. diabetes comprises an albunin fused to a therapeutic protein \dot{\gamma}

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 18, Application US/09833041
GENERAL INFORMATION:
APPLICANT: Hosen, Craig A.
APPLICANT: Rosen, Craig A.
ITLE OF INVENTION: Albumin Fusion Proteins
FILE REFERENCE: PF545
CURRENT FILLING DATE: 2001-04-12
PRIOR APPLICATION NUMBER: 60/229,358
             INFORMATION FOR SECTION TO: 26:
SEQUENCE CHARACTERISTICS:
LENGTH: SES amino acids
TYPE: amino acids
STRANDEDNESS: «Unknown»
TOPOLOGY: linear
WOLECTLE TYPE: protein:
HYPOTHETICAL: NO
ANTI-SENSE: NO
SEQUENCE DESCRIPTION: SEQ ID NO: 26
